DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Suenaga et al (JP 56-38516). Figure 2 shows a compressed air line 5 from a compressor 4 being cooled by a fan 13 in response to a temperature sensor 18.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 4-9 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harden, III et al (5386873) in view of Suenaga et al (JP 56-38516).

Harden et al disclose a compressor system comprising intercoolers 42, 45, a cooling fan 131, various temperature sensors RT1-RT5, and a pressure sensors PT1-PT5. The sensors are connected to a control unit (figure 7). However, there is no explicit teaching of how the compressor operates and that the fan is temperature controlled. Suenaga et al show a compressed air line 5 from a compressor 4 being cooled by a fan 13 in response to a temperature sensor 18. It would have been obvious to one of ordinary skill in the art to operate the fan of Harden et al to be responsive to temperature sensors of the compressed air so as to

Art Unit: 3747

prevent overheating. In regard to claim 4, the recited arrangement of activating and deactivating a compressor based on demand (read pressure in tank 46) is standard operating procedure.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Harden, III et al (5386873) in view of Suenaga et al (JP 56-38516) as applied to claim 9 above, and further in view of Foege (6068447). Foege discloses (col.3, first paragraph) the recited operation of activating and deactivating the compressor according to a low pressure and high pressure thresholds for optimum performance and to minimize cycling; therefore, to do likewise in Harden et al would have been obvious to one of ordinary skill in the art.

Allowable Subject Matter

Claims 2, 3, and 13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Noah Kamen whose telephone number is 703 308 1945. The examiner can normally be reached on M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Yuen can be reached on 703-308-1946. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
